The comprehensive reference on the basics of structural analysis and design, now updated with the latest considerations of building technology Structural design is an essential element of the building process, yet one of the most difficult to learn. While structural engineers do the detailed consulting work for a building project, architects need to know enough structural theory and analysis to design a building. Most texts on structures for architects focus

narrowly on the mathematical analysis of isolated structural components, yet *Building Structures* looks at the general concepts with selected computations to understand the role of the structure as a building subsystem—without the complicated mathematics. New to this edition is a complete discussion of the LRFD method of design, supplemented by the ASD method, in addition to: The fundamentals of structural analysis and design for architects A glossary, exercise problems, and a companion website and instructor's manual Material ideally suited for preparing for the ARE exam Profusely illustrated throughout with drawings and photographs, and including new case studies, *Building Structures, Third Edition* is perfect for nonengineers to understand and visualize structural design.

Study Guide, Instructor's Manual and Computer Applications available. -- The publisher, John Wiley Sons From the Publisher Illustrates concepts, relationships and basic processes of architectural design. Emphasizes concerns of professional designers who must cope with practical problems of how to make plans for sensible buildings and determine construction details for a specific type of edifice. This edition updates all standard reference codes, industry regulations, design procedures and current products. Features demonstration examples of the development of structural systems for two buildings from preliminary planning to construction detailing. About the Author James Ambrose is Editor of the Parker/Ambrose Series of Simplified Design Guides. He practiced as an architect in California and Illinois and as a structural engineer in Illinois. He was a professor of architecture at the University of Southern California. Patrick Tripeny is an Associate Professor, former director of the School of Architecture, and the current Director of the Center for Teaching and Learning Excellence at the University of Utah. He is a licensed architect in California. He has been the recipient of a number of teaching awards at the local and national level for his work in teaching structures and design. With James Ambrose, he is the coauthor of *Simplified Engineering for Architects and Builders, Eleventh Edition*; *Simplified Design of Steel Structures, Eighth Edition*; *Simplified Design of Concrete Structures, Eighth Edition*; and *Simplified Design of Wood Structures, Sixth Edition*, all published by Wiley.
