**Ann-Margaret Esnard, Alka Sapat : Displaced by Disaster: Recovery and Resilience in a Globalizing World (Disaster Risk Reduction and Resilience)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Displaced by Disaster: Recovery and Resilience in a Globalizing World (Disaster Risk Reduction and Resilience):

0 of 1 people found the following review helpful. The book was insightful and pointed out some of the ...By Michael

A. Microwave BrownThe book was insightful and pointed out some of the concepts and theoretical approaches such as hazard mitigation and sustainable reconstruction and recovery that still seems to have eluded policy makers and practitioners in the United States until recently. However, the author did not effectively link the new directives (PPD-8 and National Preparedness Directives/Policies) to the dominant theme of the book. Some of the EM principles she noted were outdated and not current (i.e., not noting Protection or Prevention as new spokes in the wheel for EM). Again the book was very helpful as a reference tool, but clearly not written by a person with experience as a practitioner or with an understanding of the new emergency management academic domain.

Displacement has traditionally been conceptualized as a phenomenon that results from conflict or other disruptions in developing or unstable countries. Hurricane Katrina shattered this notion and highlighted the various dilemmas of population displacement in the United States. The dilemmas stem from that of inconsistent terminology and definitions; lack of efforts to quantify displacement risk potential and that factor displacement vulnerability into community plans; lack of understanding of differential needs of "displacees" especially during long-term recovery periods; and policy and institutional responses (or lack thereof) especially as it relates to post-disaster sheltering and housing. Incorporating relevant examples, cases, and policies Esnard and Sapat look at the experience of other countries and how the international community has dealt with hundreds of thousands of individuals who have been forced to leave their homes. Displaced by Disaster addresses such issues from a planning and policy perspective informed by scholarship in disciplines such as emergency management; political science; sociology and anthropology. It is ideal for students and practitioners working in the areas of disaster management, planning, public administration and policy, housing, and the many disciplines connected to disaster issues.

"This meticulously researched book offers the most comprehensive statement available on the causes and consequences of population displacement in the aftermath of disaster. Esnard and Sapat have crafted a highly readable, nuanced, and moving account of why displacement matters in the United States and globally. They also present new and important new insights regarding what could potentially be done to minimize the vulnerability of those living in risky areas. Displaced by Disaster should be required reading for anyone interested in better understanding what will surely represent one of the greatest humanitarian challenges of the twenty-first century." - Lori Peek, Colorado State University, Co-Editor of Displaced: Life in the Katrina Diaspora "This text provides an excellent introduction to and critical examination of the factors and debates surrounding population displacement. The book has a very clear structure and is written in an accessible and engaging manner, providing an invaluable aid to undergraduate and postgraduate students across a range of disciplines, including geography, sociology, psychology and politics." ndash; Environmental Values, Ewan J. Woodley, University of Exeter
