Lee J. Ames, Erin Harvey : Draw 50 Outer Space: The Step-by-Step Way to Draw Astronauts, Rockets, Space Stations, Planets, Meteors, Comets, Asteroids, and More before purchasing it in order to gage whether or not it would be worth my time, and all praised Draw 50 Outer Space: The Step-by-Step Way to Draw Astronauts, Rockets, Space Stations, Planets, Meteors, Comets, Asteroids, and More:

0 of 0 people found the following review helpful. Helpful Drawing Book for Older Kids to AdultsBy Ellybean"Draw 50 OutSpace" by Lee J. Ames with Erin Harvey is a step-by-step drawing book that will appeal to any space enthusiast.nbsp; In this book, one is prompted to mimic the making of space-themed pictures. There are astronauts, space stations, rockets, planets, space rocks, satellites, rovers, and a plethora of other space-themed things.This book

has a To The Reader, To The Parent, 50 things to draw, and an About The Author And Illustration section. The drawing method in this book is step-by-step. You can start with the first, next, or ending picture to draw your own version of it. The author encourages the student to start where they feel comfortable. He gives many great tips on starting and finishing your piece. As pointed out in the book, the only drawing tools you will need are a medium or soft pencil, paper, a kneaded eraser, and if preferred, a pen or brush and ink. I like the author was helpful in providing this information. The pictures within are all in pencil with no color. The pictures are realistic and not in a cartooning type style. I'm using this book along with our homeschool science studies. I'm drawing the images alongside my children. I'm teaching them to have fun with it and that the picture doesn't have to be exact. It's been great practice drawing single pictures. We plan on compiling many of the different drawings together into a single picture as we go along. Whether a beginner artist or more advanced, I feel one will reap from the advice given by the author and the drawing instruction style to follow. I recommend this book to those that love outer space, drawing, and a good challenge. I received this book for free from Blogging for Books in exchange for my honest unbiased opinion. 0 of 0 people found the following review helpful. What's better than a book that teaches you to draw? A book that teaches you how to draw things from outer space! In "Draw 50" by Lee J. Ames, Space enthusiasts learn how to draw astronauts, rocket ships, galaxies, meteors and much more! Each drawing has pictures throughout the process so artists can see their drawings begin to come alive. It's aimed at children ages 10 to 13, but can definitely be enjoyed by older artists as well. I was super excited to get this book in the mail! I've always loved all things outer space related, and especially with the big solar eclipse that just occurred, I thought this book would be a fun activity to work on with my kids. I will say that to draw a lot of these, readers will probably have to have some sort of experience in drawing. Some of the pictures are very detailed and intricate. I am not the best at drawing, but I won't let the difficulty deter me! It's still a very fun and cute book. I received this book for free from Blogging for Books in exchange for my honest unbiased opinion. 0 of 0 people found the following review helpful. My rating of "Draw 50 Outer Space" is 4 out of 5 stars. By DelAnne Title: Draw 50 Outer Space - The Step-by-Step Way to Draw Astronauts, Rockets, Space Stations, Planets, Meteors, Comets, Asteroids, and More Author: Lee J Ames Erin Harvey Publisher: Ten Speed Press Published: 7-25-2017 Pages: 64 Genre: Arts Photography Sub-Genre: Drawing; Educational; Pen Pencil, Teaching; Instructions Reference ISBN: 9780399580192 ASIN: B01MXHD4XY Reviewed For NetGalley and Ten Speed Press Reviewer: DelAnne Rating: 4 Stars Gearing to the more advanced artist. I found the finishing touches on a few of these to be a bit vague or even non-existent. In some cases it was a matter of looking at the completed example and trying to match it up. Overall though it was fun and suitable for budding artist with above average talent. (Which does not include me!). I did enjoy what I learned though and was pleased with the drawings I was able to complete without too much trouble. My rating of "Draw 50 Outer Space" is 4 out of 5 stars.

Part of the best-selling Draw 50 series this step-by-step guide to sketching and rendering astronauts, planets, asteroids, comets, spaceships, space stations, and other elements related to outer space exploration is for artists of all levels. In this new installment of Lee J. Ames's beloved Draw 50 series, readers will find easy-to-follow, step-by-step lessons for outer space drawing. In each lesson, six wordless steps provide everything needed to master drawing all kinds of planets, moons, comets, and meteors, as well as astronauts, rockets, spaceships, and other aspects--both natural and manmade--related to charting the cosmos.

About the Author LEE J. AMES began his career at Walt Disney Studios and taught at the School of Visual Arts in New York City and Dowling College on Long Island, New York. He directed his own advertising agency and illustrated more than 150 books, ranging from preschool picture books to postgraduate textbooks. A prolific author of more than thirty Draw 50 books, Ames died at the age of 90 in 2011. ERIN HARVEY is an artist who works primarily in pencils, charcoals, oils, and pen and ink. She lives outside Atlanta with her husband, Ben, and their two children.
