Colin Porteous : The New Eco-Architecture: Alternatives from the Modern Movement before purchasing it in order to gage whether or not it would be worth my time, and all praised The New Eco-Architecture: Alternatives from the Modern Movement:

The New Eco-Architecture builds a historical bridge between architectural science and design. It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty-first century environmental needs and priorities. The attitudes and influences of renowned figures are re-examined in relation to current issues of architectural sustainability. By setting today's green architectural quest within a twentieth century context, and evaluating the main protagonists with regard to a modern

eco-sensitive lineage, the book will be of primary interest to architectural students, academics and practitioners. However, it should also intrigue historians, theoreticians and critics, who tend to gloss over such issues, as well as other disciplines engaged with the built environment.

'New Eco-Architecture is an intriguing book' - Architectural 'Thought provoking. Recommended for architects and builders.' - Permaculture Magazine
About the Author
Colin Porteous is Senior Lecturer in Architectural Science at the Mackintosh School of Architecture, Glasgow School of Art, Scotland, and has had a long involvement with passive solar design and research.
